## The Measles Initiative to Reduce Childhood Mortality in the African Region

Dr. Robert Kezaala - WHO AFRO

This presentation reflects the work and contribution of Ministries of Health of many countries as well as support and collaboration of many partners

# Annual Estimates of Vaccine Preventable Deaths - African Region 

Measles
HiB
Hepatitis B
Pertussis
Neonatal Tetanus 93,141
Yellow fever
Total
1,025,000

# Cause-Specific Childhood Deaths in Africa 

## (4.2 million total annual deaths)

$60-<75 \%$
$\square=/>75 \%$

Burkina Sentinels Sites Measles Follow up (Age distribution)

Ghana Central Prov. - Results from 3 Districts Age distribution of Measles Cases: 1996-2000

## Age distribution of measles Cases Kenya, 1998-2001

Source: KEPI Measles outbreak data

## Strategies for achieving sustainable reduction of measles mortality

- Reduce the number of annual measles deaths by half by 2005.

1. Routine immunization - achieve $>90 \%$ routine vaccination coverage (in each district and nationally) with at least one dose of measles vaccine administered at 9 months of age or shortly thereafter.
2. Second opportunity for measles vaccination - for all children through routine or supplemental activities.
3. Measles surveillance - establish effective surveillance for measles to report regularly the number, age and vaccination status of children contracting or dying from measles, to conduct outbreak investigations and to monitor immunization coverage.
4. Improve management of complicated cases including vitamin A supplementation and adequate treatment of complications.

Reported Measles Cases and Deaths by Year, 7 Southern African Countries, 1980 September 2001

Cases $\mathbf{9 0 , 0 0 0}$

## Cost of Vaccinating a Child with Measles Vaccine in Africa During a Mass Campaign

Measles vaccine
AD syringes
Operational costs
Social mobilisation

Total
$\sim 0.15$ USD
~ 0.10 USD
$\sim 0.40$ USD
~ 0.10 USD
$\sim 0.75$ USD

## Projected Cost/Death Prevented During Measles Campaigns by Size of Campaign

Size of Target Population (millions)

## Status - $2^{\text {nd }}$ Opportunity Measles Vaccination African Region, Dec 2002

## Measles Surveillance in AFR:

## Proportion of Reported Cases with a Blood

 Specimen Taken for Lab. Confirmation

## Measles Surveillance in AFR-2

## Proportion of Districts Reporting at Least 1 case per 100,000 Population

## Projected Impact on Measles Mortality in the African Region (1990-2003)

## Conclusion

(1) Real progress has been made in reducing measles mortality in the AFR region.
(2) More efforts needed in improving routine measles vaccination (1 ${ }^{\text {st }}$ Opportunity).
(3) Need for more resources: allocation by Min. of Health and support from partners.
(4) Need to further improve quality of immunization, monitoring, evaluation \& surveillance.
