**Definitions**

- New HIV positivity was defined as a record for which there was a current positive HIV test result and no self-report of a previous positive HIV test.
- Missing data are defined as information that was not captured on the HIV testing form.
  - For receipt of test results, specifically, missing data could also mean one of three things:
    - 1) No posttest counseling was done;
    - 2) Posttest counseling was NOT done for HIV-negative records; or
    - 3) Test results were provided, but the data were not captured on the testing form.
